YETI SPRING/SUMMER 2019 COLLECTION  
INSPIRED BY THE ISLAND OF SYLT

Located in the North Sea the islands exposed situation and distinctive shape of its shoreline offers highly contrasting weather. The island contains both summer resorts and beautiful nature, including a 40-kilometre-long sandy beach. But the harsh nature also causes an ongoing loss of land during storm tides.

*inspired by the island of Sylt*

# Ethical Down Code

## **Respect for nature since 1983**

From the very early days, down was regarded as a high valued core component at Yeti. It has been a constant procedure at Yeti to understand and work towards the lowest possible impact on the nature around us. In the nineties Yeti developed its own system to ensure traceability of the down, and to simply ensure its supply chain was of a good quality – but also to ensure animal welfare, which was a certain issue as well.

For years Yeti has been working to ensure optimal conditions for its most precious component. This is done via a set of European Union rules around an initiative called European Down & Feather Association. Yeti has followed this codex for years, which ensures a firm code of conduct for how to treat the animals, but, unlike most other attempts, also ensures that the down meets a certain quality level.

It has been a constant process for Yeti to ensure conditions for animals. It still is! Even more so, there is a constant focus to keep developing and increasing standards. Yeti has a “zero tolerance policy”. Are we there yet? Not quite, but very far and Yeti has a constant focus on:

- Animal welfare - the key element
- Handling and implementation, guided by a clear code of conduct
- Only birds for meat production, no live plucking allowed
- No force feeding allowed
- Free range birds - no steel cage birds allowed
- Access to healthy food, water, shelter, and light
- Flock density is restricted and monitored
- Handling and transportation is legislated
- No parallel production allowed
- Only European production

All is according to the European Down & Feather Association (EDFA) and monitored and controlled by an independent third party, which is the International Down and Feather Laboratories (IDFL).

It all started with the ambition to create the world's best sleeping bag - and now more than 30 years later, we have accomplished far more than that! Since 1983 Yeti has been working according to the principle of quality before quantity.

# Yeti Story

## **Quality equipment from outdoor enthusiasts**

Yeti was founded in East Germany near Berlin in 1983. The vision was to create outdoor equipment that would withstand extreme conditions. The focus was on high-quality down sleeping bags and down clothing providing optimal protection in harsh weather. These fundamental conditions still remain an integral component of the Yeti-philosophy in the entire product strategy.

At that time no other products met these requirements, and thus Yeti constructed the first sleeping bags with local down and materials. The quality continuously improved and the interest in high-quality products grew increasingly. Soon, Yeti products were being used for extreme expeditions, like in the mountains of Kazakhstan and Kirgizia.

## **Handmade in Germany**

Ever since, Yeti has kept this position, and over the years Yeti has become synonymous with the highest down quality and exclusive outdoor products. Today, Yeti is the brand leader within high-end down products ranging from extreme sleeping bags to ultimate down gear including the world's lightest sleeping bag, weighing only 280 grams. Staying true to our roots, all Yeti sleeping bags are still made in Germany by dedicated craftsmen with years of experience...

# Yeti Down – Crystal Down

Producing equipment for expeditions exploring the coldest areas of the world. Therefore, all Yeti products are filled with Crystal Down™ – a selection of the absolute finest and most voluminous European down.

## **Crystal Down™ - a masterpiece of nature**

Mother nature ensures that all Yeti sleeping bags and garments are highly insulating and keeps you warm while surprisingly light. The secret is the finest insulation material known to man; down - they keep birds warm and yet light enough to fly. Nothing beats Mother Nature. Down are by nature highly packable as they resist a small amount of pressure but gives in under stronger pressure. The down withstand the impact and return to their initial form when uncompressed.

## **Gentle but tough**

The down that warms the goose's chest and belly are excellent. Thousands and thousands of super-soft, keratin filaments grow radially outwards from a tiny centre. Each of these filaments contains innumerable tiny, branch-like fibres with nearly invisible hooks. When the down are packed together, they attach themselves to each other and build thousands of tiny, warmth-retaining air chambers. This natural solution is lighter, more flexible and better insulating than anything that humankind has ever developed.

## **The loftier, the fluffier**

Down are static masterpieces with a fill power (loft), that resists a small amount of pressure but gives in under stronger pressure. Loft is measured by laboratories under the supervision of the International Down and Feather Laboratory (IDFL) in Salt Lake City, USA. The higher the volume, the higher the loft and the quality. Yeti-down achieve the highest possible bulking power of up to 900 cubic inches. In recognition of its large, organically grown power and beauty they are called Crystal Down™.

## **Crystal Down™ Dry**

Down has a tendency to collapse when wet, which has kept down fanatics a bit frustrated under very humid conditions. But not anymore. It is possible to prevent the down from absorbing water. That's why we call Crystal Down treated with this technology Crystal Down Dry. In 2014 we started to fill the jackets Mode and North with this innovative kind of down. Today we are using Crystal Down Dry in a large number of products including the Fusion range of high-end sleeping bags and the range of down filled rain jackets.

# Constructions

## Stitched through

The most simple design is to use the stitched through construction. Here the shell and lining are stitched together directly on top of each other to create the chambers into which the filling is inserted.

## Down with shell

The combination with an extra outer layer provides stronger protection against the elements, higher insulation and increased durability.

## Down with rain shell

The combination with a waterproof outer layer provides the best possible protection against all elements. Taped seams and waterproof zippers make this construction the perfect partner for any cold and rainy weather.

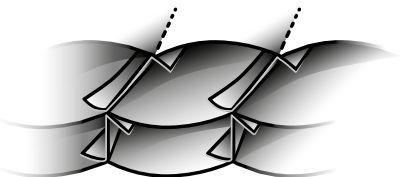

## H-Box

The H-box construction is divided into different chambers with vertical side walls to keep the insulation in place and to avoid cold bridges. This ensures a uniform thickness of insulation all through the sleeping bag.

## S-Box

A slanted wall construction creates a more difficult path for heat to escape along the relatively low-density insulation area against the side wall. This improves the thermal efficiency of the bag even more than box wall construction.

## H+S Box

The H+S Box construction combines the best from the H-Box and S-Box chamber construction for the greatest possible insulation, ensuring that the down will stay in place in every situation and eliminating every possible risk of cold bridges.

# BALANCE

## New tempting sleeping bag

The new super soft Balance sleeping bag made of 15 denier fabric has an exceptionally smooth surface, that feels pleasant to your skin. Together with the finest European down the Balance sleeping bag provides full relaxation.

Vertical front down chambers evenly distribute the heat between upper body and foot area, balancing out the body's different temperature zones. The water repellent and quick drying Crystal Down™ Dry ensures that moist is not absorbed by the down and keeps you comfortable while sleeping.

# Balance 400
