Ethical Down Code

Respect for nature since 1983

From the very early days, down was regarded as a highly valued core component at Yeti. It has been a constant procedure at Yeti to understand and work towards the lowest possible impact on the nature around us. In the nineties Yeti developed its own system to ensure traceability of the down, and to simply ensure its supply chain was of a good quality – but also to ensure animal welfare, which was a certain issue as well.

For years Yeti has been working to ensure optimal conditions for its most precious component. This is done via a set of European Union rules around an initiative called European Down & Feather Association. Yeti has followed this codex for years, which ensures a firm code of conduct for how to treat the animals, but, unlike most other attempts, also ensures that the down meets a certain quality level.

It has been a constant process for Yeti to ensure conditions for animals. It still is! Even more so, there is a constant focus to keep developing and increasing standards. Yeti has a “zero tolerance policy”. Are we there yet? Not quite, but very far and Yeti has a constant focus on:

- Animal welfare - the key element
- Handling and implementation, guided by a clear code of conduct
- Only birds for meat production, no live plucking allowed
- No force feeding allowed
- Free range birds - no steel cage birds allowed
- Access to healthy food, water, shelter, and light
- Flock density is restricted and monitored
- Handling and transportation is legislated
- No parallel production allowed
- Only European production

All is according to the European Down & Feather Association (EDFA) and monitored and controlled by an independent third party, which is the International Down and Feather Laboratories (IDFL).

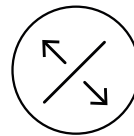

It's all about **quality**

CRYSTAL DOWN DRY

Crystal Down® Dry

Hydrophobic down

Durable water-repellent and quick drying down
Remains light and warm in wet conditions
Retains loft and insulation to keep you comfortable

Moveskin Polygiene

Performance fabric that keeps you fresh

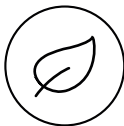

The powerful anti-bacterial technology behind Moveskin Polygiene will let you enjoy your sweat driving activities even more.
Spend less time with washing – spend more time with exercising!

CRYSTAL DOWN

Crystal Down®

Ethically sourced quality down

A selection of the finest and most voluminous European down.
Down is by nature perfectly insulating and highly packable.
Sourced according to Yeti's Ethical Down Code to ensure animal welfare.

Next to Nature®

Eco-friendly Nylon

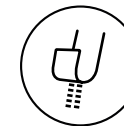

Eco-friendly plant-based Nylon.
Based on renewable plant oil instead of fossil oil.
Protecting nature without compromise functionality.

XD Tech Membrane

Highly functional rain protection

Our hydrophilic membrane adjusts automatically to the surrounding humidity. For you this means, the higher the humidity the more breathable your membrane gets. Perfect for high active use!

Taped seams

Fully Taped Waterproof Seams

Taped seams are used on waterproof garments.
When waterproofing a garment, holes from the stitching get covered.
A special tape is melted over the seams to seal them.

Yeti Story

It all started with the ambition to create the world's best sleeping bag – and now more than 30 years later, we have accomplished far more than that! Since 1983 Yeti has been working according to the principle of quality before quantity.

Quality equipment from outdoor enthusiasts

Yeti was founded in East Germany near Berlin in 1983. The vision was to create outdoor equipment that would withstand extreme conditions. The focus was on high-quality down sleeping bags and down clothing providing optimal protection in harsh weather. These fundamental conditions still remain an integral component of the Yeti-philosophy in the entire product strategy.

At that time no other products met these requirements, and thus Yeti constructed the first sleeping bags with local down and materials. The quality continuously improved and the interest in high-quality products grew increasingly. Soon, Yeti products were being used for extreme expeditions, like in the mountains of Kazakhstan and Kirgizia.

Handmade in Germany

Ever since, Yeti has kept this position, and over the years Yeti has become synonymous with the highest down quality and exclusive outdoor products. Today, Yeti is the brand leader within high-end down products ranging from extreme sleeping bags to ultimate down gear including the world's lightest sleeping bag, weighing only 280 grams. Staying true to our roots, all Yeti sleeping bags are still made in Germany by dedicated craftsmen with years of experience...

Yeti Down – Crystal Down

Crystal Down® - a masterpiece of nature

Mother nature ensures that all Yeti sleeping bags and garments are highly insulating and keeps you warm while surprisingly light. The secret is the finest insulation material known to man; down – they keep birds warm and yet light enough to fly. Nothing beats Mother Nature. Down are by nature highly packable as they resist a small amount of pressure but gives in under stronger pressure. The down withstand the impact and return to their initial form when uncompressed.

Gentle but tough

The down that warms the goose's chest and belly are excellent. Thousands and thousands of super-soft, keratin filaments grow radially outwards from a tiny centre. Each of these filaments contains innumerable tiny, branch-like fibres with nearly invisible hooks. When the down are packed together, they attach themselves to each other and build thousands of tiny, warmth-retaining air chambers. This natural solution is lighter, more flexible and better insulating than anything that humankind has ever developed.

The loftier, the fluffier

Down are static masterpieces with a fill power (loft), that resists a small amount of pressure but gives in under stronger pressure. Loft is measured by laboratories under the supervision of the International Down and Feather Laboratory (IDFL) in Salt Lake City, USA. The higher the volume, the higher the loft and the quality. Yeti-down achieve the highest possible bulking power of up to 900 cubic inches. In recognition of its large, organically grown power and beauty they are called Crystal Down®.

Crystal Down® Dry

Down has a tendency to collapse when wet, which has kept down fanatics a bit frustrated under very humid conditions. But not anymore. It is possible to prevent the down from absorbing water. That's why we call Crystal Down treated with this technology Crystal Down Dry. In 2014 we started to fill the jackets Mode and North with this innovative kind of down. Today we are using Crystal Down Dry in a large number of products including the Fusion range of high-end sleeping bags and the range of down filled rain jackets.

Producing equipment for expeditions exploring the coldest areas of the world. Therefore, all Yeti products are filled with Crystal Down® – a selection of the absolute finest and most voluminous European down.

CRYSTAL DOWN DRY

EXTEND

Expedition down gloves

Professional expedition down gloves for extreme use. Designed for the most extreme cold protection imaginable. Extend gloves are constructed in a H-box style and filled with water-resistant and quick drying Crystal Down® Dry. The outer shell is made of a windproof, water-repellent and breathable Aqua Pro Lite II fabric. Enforced with Cordura® fabric on gripping parts of the glove, on the inside a soft microfleece lining adds to the insulation.

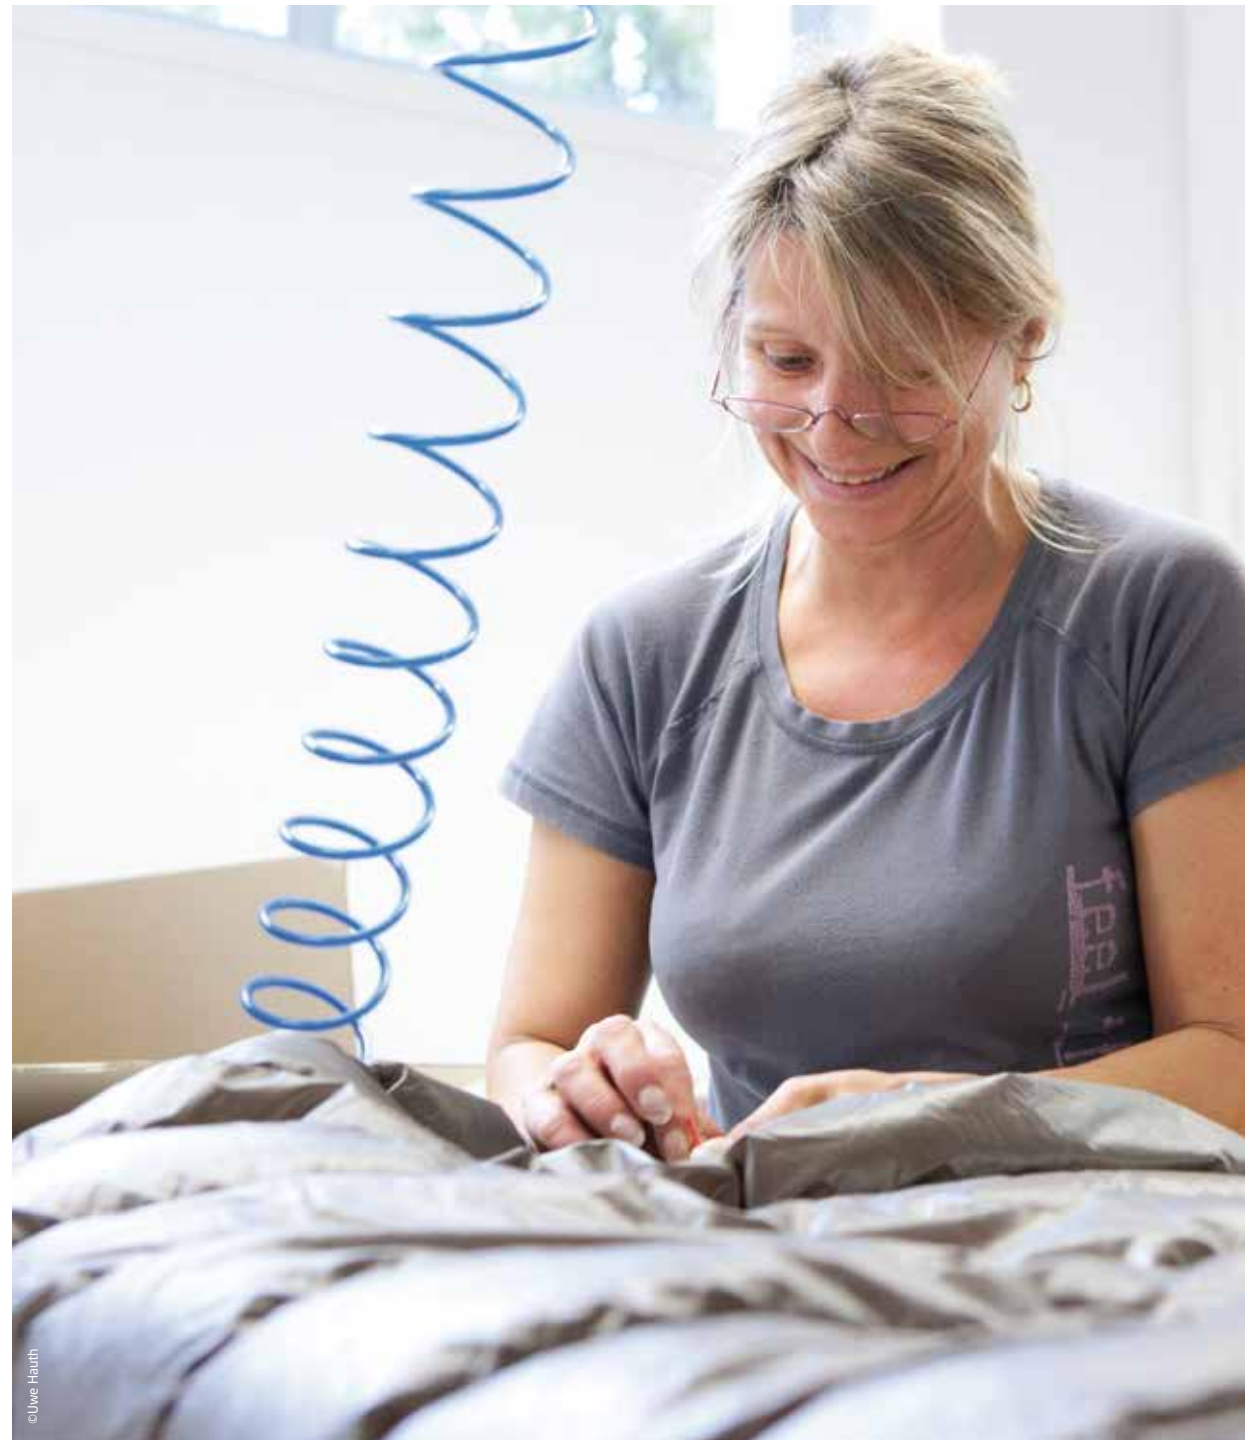

- Crystal Down® Dry - Premium European DWR down
- Warm and soft microfleece inside
- Adjustable cuffs and glove opening
- Palm with grip support

Genuine craftsmanship

Yeti takes great pride in our history, so we place great emphasis on maintaining our tradition of hand made sleeping bags at our factory in Görlitz, Germany. The high-quality standard is the reason why Yeti products will suit your needs - no matter if you're in the cold Arctic, walking the Camino or climbing the highest peaks in the world.

It all started with the ambition to create the world's best sleeping bag - and now more than 30 years later, we have accomplished far more than that!

Since 1983 Yeti has been working according to the principle of quality before quantity. All the materials used, have been carefully selected and tested to ensure that they live up to stringent requirements and norms.

Constructions

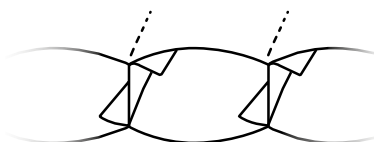

Stitched through

The simplest design is the classic stitched through construction. Shell and lining are stitched together directly on top of each other to create chambers into which the filling is inserted.

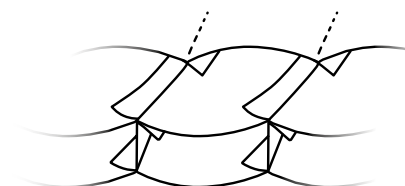

S-Box

A slanted wall construction creates a more difficult path for heat to escape. This improves the stability and thermal efficiency of the bag over the H-box wall construction.

H-Box

The H-box construction is divided into different chambers with vertical side walls to keep the insulation in place and to avoid cold bridges. This ensures a uniform thickness of insulation all through the sleeping bag.

H+S Box

The H+S Box construction combines the best from the H-Box and S-Box chamber construction for the greatest possible insulation, ensuring that the down will stay in place in every situation and eliminating risks of cold bridges.

SLEEPING BAG SHAPE AND FIT

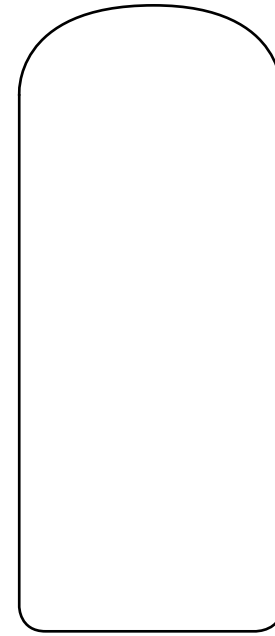

EGG

The Egg shape's tapered design offers a good balance between insulation and space - freedom of movement at its most. The Egg shape provides great warmth but still leaving plenty of room for a comfortable night's sleep. Ideal for users not exposed to extreme temperatures but wish comfort and performance to go hand in hand.

MUMMY

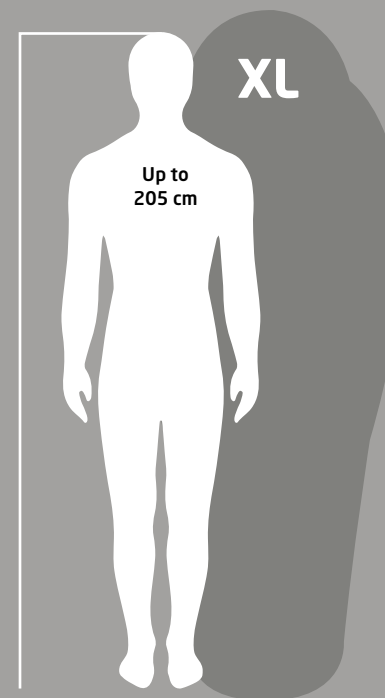

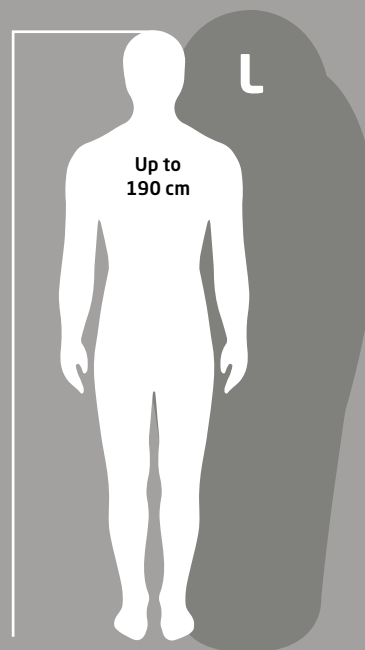

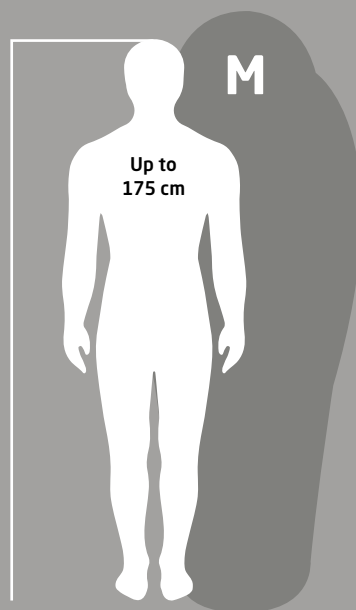

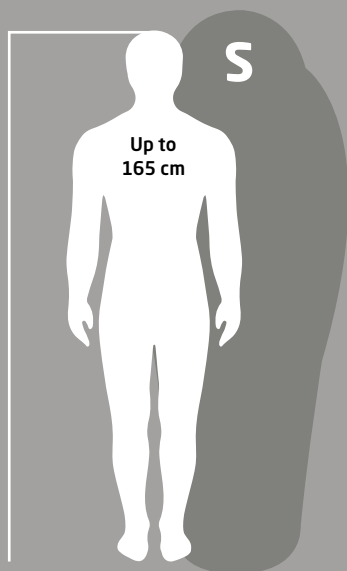

Inspired by the old Egyptian mummy, the Mummy shape is fitted the human body contour. The bags are wide across the chest then tapering down to a narrower width in the end. Mummy has a snug fit with optimal insulation properties - keeping air gaps to a minimum. Ideal for outdoor enthusiasts with focus on high-performance.

BLANKET

The rectangular Blanket shape is designed with maximum comfort and roominess in mind. The Blanket shape can be used as a regular sleeping bag or as a blanket. Ideal for users who are prone to turning during sleep or feel confined in tight spaces. If choosing two bags with compatible zippers, they can easily be mated and create a double size bag.

Water-repellent

CRYSTAL DOWN DRY

ARCTIC

Extreme condition down protection

The Arctic sleeping bags are constructed for use in conditions ranging from rough to the most extreme imaginable. Its outer casing is made from an extra durable and water-repelling shell fabric. The filling is Crystal Down® Dry down with a DWR (durable water-repellent) coating that makes the individual down fibres moisture repellent and faster drying – without compromising the insulation power. The Arctic sleeping bags are tested in the most extreme and uncompromising conditions.

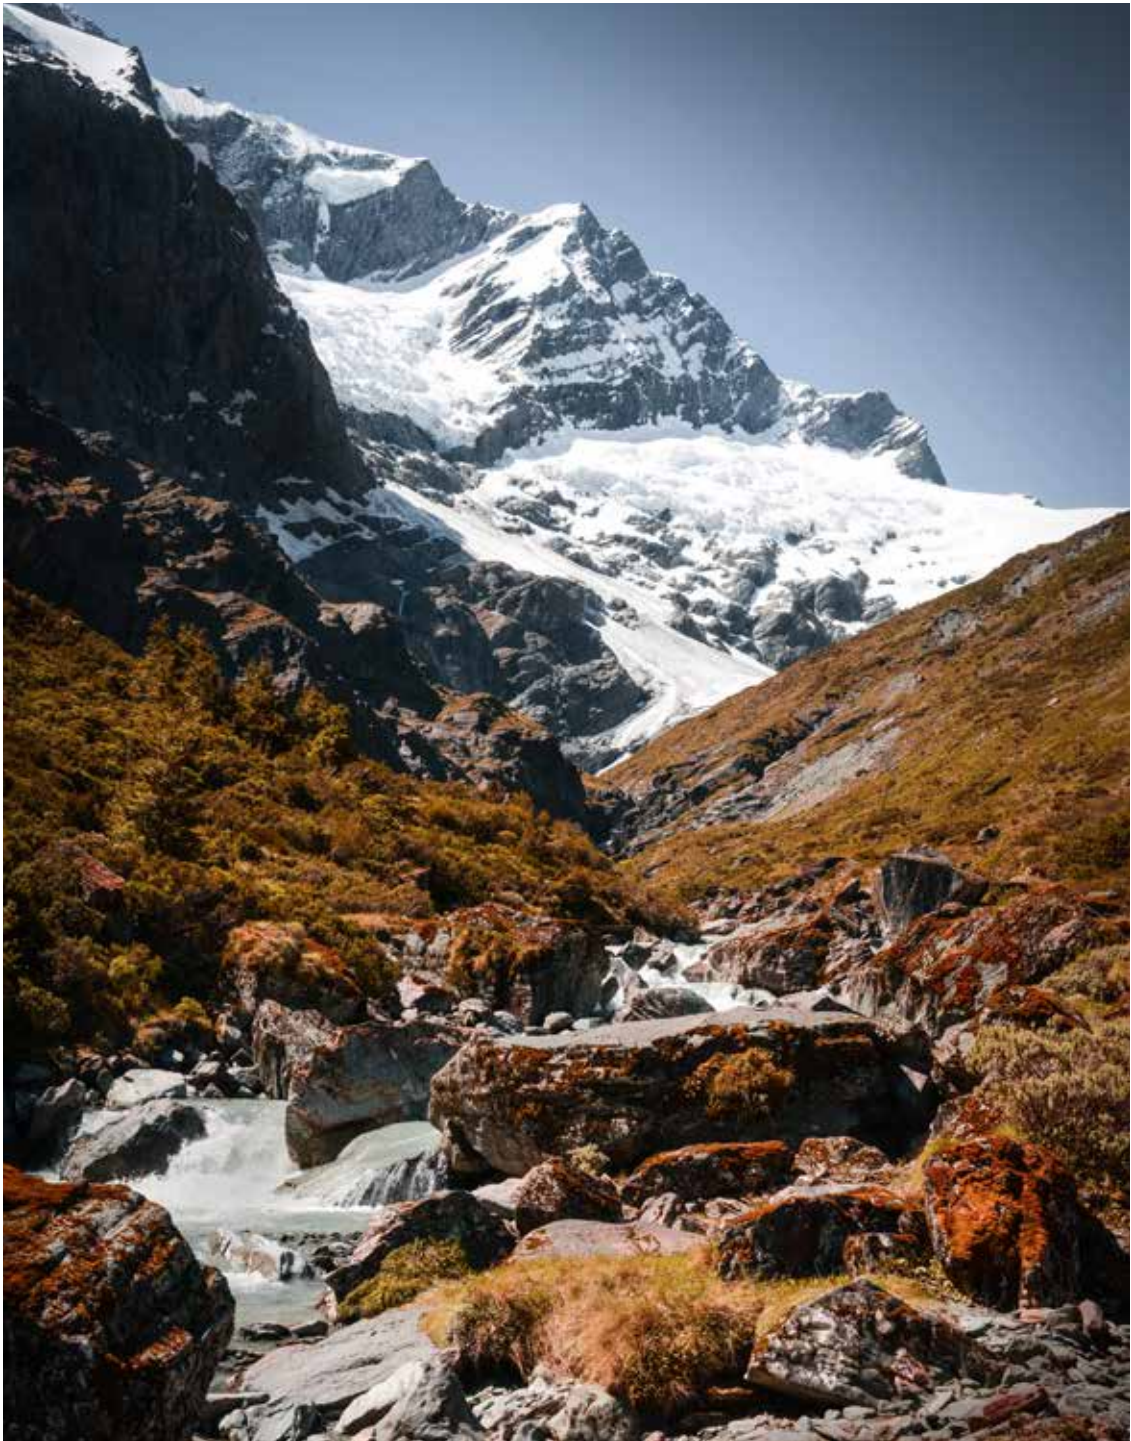

- Durable and water-repellent outer shell
- Water-repellent and quick drying down filling
- 3 layer footbox
- Adjustable contoured hood
- Adjustable iso collar
- Freezing puff around face opening
- Zipper baffle and outer wind flap
- Inner mesh pocket
- Knee length zipper

For the true adventurer. An expedition is not the place for compromise or false presumptions. The Arctic is a no-nonsense sleeping bag that will simply keep you warm and dry. Promise.
