

NORDISK®

Autumn / Winter 2022
Apparel

Recycle. Upcycle. Bicycle.

Getting more people outdoor has always been at the heart of Nordisk and we are happy to advocate a more active and outdoor lifestyle. We develop products that make it easier, safer and more fun to move, camp and live outside.

Respect for nature since 1901

Our pact with nature remains the same. We have always been committed to sustainability and the recent shortage of supplies and global logistics challenges, have only strengthened our belief that we are on the right path.

Recycling and upcycling are not only beneficial for our surroundings. They are also two ways of dealing with an increased demand of the lifestyle we are committed to, when supplies are low. So we launch an AW22 collection with a very strong focus on **recycled** fabrics and components. Even better is **upcycling**. The art of taking a waste product, purifying it and turning it into a high value component is exactly what we do with our 100% European Crystal Down®.

At Nordisk we only use surplus down from the food supply chain to insulate our jackets or sleeping bags. This gives you a completely natural product, that is lighter, warmer, and more breathable than any product using man-made fibers. And this from a product that would have otherwise been wasted.

Commuting Consumers

For reasons relating to both health, social development, traffic, economy and a work/life balance, we see more and more people choosing two wheels over four. We see it as an obligation to support this healthy development by making sure that urban commuters can make this transition without weather concerns.

So we have dedicated our 2022 Autumn/Winter collection to all the active and conscious consumers out there, making sure that spending more time outside will in fact improve your quality of life and become a permanent choice – also if you simply are on a bicycle on your way to work.

We are ready. Bring on winter.

Erik J. Møller

Owner & CEO (Chief Executive Outdoorer)

BY

NORDISK®

=

**Sustainable
Superpowers**

Down is by far the best, lightest, warmest, most breathable and most compressible insulation material known to man.

At Nordisk, we make sure that these superpowers do not come at the cost of animal welfare.

Crystal Down® is a by-product from food production, that would have otherwise been wasted. It is upcycling in the best sense. In every single product bearing the iconic red Y.

CRYSTAL DOWN®

Dedicated to our Planet

We consider Nordisk to be part of a simple ecosystem, where nature is an integral part of our design process, and for that, we thank nature by acting responsibly.

Not *just* by funding an NGO.

Not *just* by removing PVC from packaging.

Not *just* by acquiring an industry standard certificate.

And not *just* by a lonesome marketing project.

For decades, Nordisk has invested in responsible production, developed internal sustainability standards that exceed industry certificates, and invested in innovative materials to benefit the future of the nature, we hold so dear. And we keep exploring new ways to do good, while delivering quality gear that lasts a lifetime.

A responsible Partner

Nordisk is part of The Business Social Compliance Initiative – the leading business-driven initiative for companies committed to improving working conditions in the global supply chain.

We fight for the Global Goals

In 2015, world leaders agreed to 17 goals for a better world by 2030. These goals have the power to end poverty, fight inequality and stop climate change.

We are excited to have joined the project, where Nordisk and the UN now work closely together to reach the Global Goals for Sustainable Development.

NORDISK®
ORGANIC  COTTON

HANDMADE IN GERMANY

We are very proud of our production and service facility in Görlitz, where we build our down sleeping bags by hand and have done so for almost 40 years.

THE GLOBAL GOALS

DON'T POISON YOURSELF!

At Nordisk we are working actively to reduce and eliminate the range of chemicals used in products and production processes. So we strive to ensure that the materials and chemicals used are as eco-friendly and non-harmful as possible. From preparation of raw materials to actual production (including the people engaged in it) to the use of the products by the end consumer.

SUSTAINABILITY BEGINS WITH PRODUCTS THAT LAST!

Certified responsible

Apart from our own strict Ethical Down Code, we obviously comply with international regulations set forth by the European Down & Feather Association and the Responsible Down Standard

DON'T WORRY – we can fix it

Having our own manufacturing facility in Germany, allow us to offer a fast and reliable repair service, ensuring your product a longer lifespan and giving new life to damaged products.

Ethical Down Code

Animal welfare, reliable traceability and exceptional quality have always been our priority when choosing our insulation fillings. So we invented our own strict down policy, years before international standards were introduced, and to this day, our own Ethical Down Code is still a better protection of both animals and planet than standard certificates and legislation such as RDS and EDFA.

Every single piece of Crystal Down is traceable, washable and from Europe. Read more on www.thedownspecialist.com

RECYCLING FOR A BRIGHTER FUTURE

By turning used plastic bottles and fishing nets into new fabrics and fibre fillings, we help remove harmful materials from nature.

A PATH UNVEILED: NYLON CAN BE GROWN

In 2014, in collaboration with Toray Inc, we developed the world's first eco-friendly down jacket. By extracting plant oil from the Ricinus plant, we have made it possible to create sustainable nylon fibres, replacing the need for crude oil that would take nature hundreds of thousands of years to form, and even longer to recover from.

NEXT TO NATURE

100% PFC FREE IS OUR GOAL

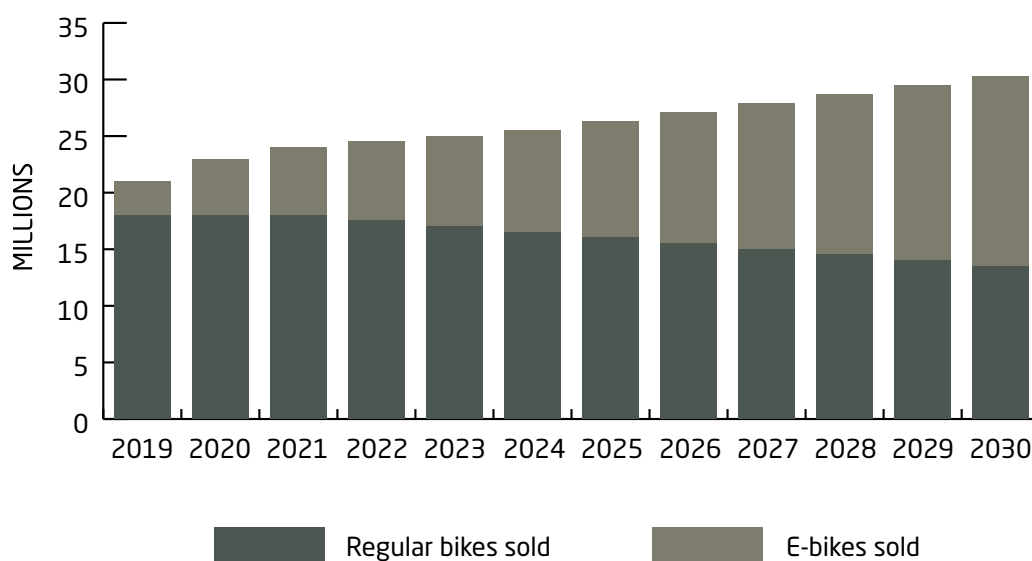

PFCs (Per-fluorinated compounds) are generally part of DWR (Durable Water Repellent) treatments due to their superior water and oil repellency. PFCs are harmful to the environment, and Nordisk is constantly working on removing all PFCs from our apparel – and we are getting closer and closer to our goal.

TREND // URBAN COMMUTING

Urban commuting by bike is one of the fastest growing global trends. Rapidly increasing numbers of citizens and vehicles have a direct impact on the air quality in cities, and the consumers are starting to react.

Public transportation used to be the go-to solution, but social restrictions have boosted the need for safe and sustainable alternatives like biking. By looking at the statistics for bike sales, we see that people have invested heavily in this behavioural change, meaning that the trend is more likely to grow and cause an increased demand for suitable accessories, such as bike friendly clothing.

PROJECTED EU BIKE SALES 2019 - 2030

We are so excited to introduce our AW22 collection: Urban Explorer. Inspired by a growing popularity of biking and multifunctionality, our new collection is designed for your safe and comfortable city commute as well as outdoor adventures everywhere.

You will find proven high quality products and bestsellers side by side with some exciting new additions, that provide an answer to the huge change in global commuting behaviour.

Please enjoy!

- The Nordisk R&D Team

GLOBAL GOALS

Making transportation more sustainable is of critical importance for people and planet. Cycling is directly linked to 11 of the 17 Global Goals for Sustainable Development set out by the United Nations.

Nordisk is already a proud partner of the UN's SDG programme, developing innovative solutions to sustainable tourism around the globe. Adding a focus on commuting to our range of outdoor apparel is a logical next step.

Nordisk Villages

In the pursuit of more sustainable alternatives to luxury tourism, Nordisk has opened luxury glamping vacation spots on 3 continents. In idyllic locations, guests will feel second-to-none hotel luxury, without leaving any footprint but their own.

Enjoy your time off in a Nordisk Village - nature's own billion star hotel.

Nordisk Hygge Circles Ugakei in Japan

Nordisk has recently opened the gates to the world's first 100% sustainable outdoor theme park, that incorporates 11 of the 17 Global Goals.

Nordisk Hygge Circles Ugakei is built exclusively from biodegradable materials and let visitors experience the Scandinavian outdoor lifestyle while learning about the UN Global Goals and sustainable living. All in a setting that proves that nature is our greatest luxury.

INTRODUCING BIKE FRIENDLY

We have added a new icon to the mix.
"Bike Friendly" garments will get you safely through traffic and still make you look and feel great when you are no longer on the go.

MOVABILITY

Stretchy fabrics, raglan sleeves and a 2-way zipper for extra legroom are some of the features that let you move freely on your bike.

WEATHER PROTECTION

With any *Bike Friendly* jacket from Nordisk, you can be safe in taking on the elements. You are completely protected from wind and rain, and the sustainable Crystal Down® filling will keep you warm throughout the winter.

Bike Friendly

BREATHABILITY

A big concern for urban commuters is the need for apparel that will keep you warm and dry - even after getting your pulse up on your way.

We have had a big focus on the breathability of the fabrics, but also on extra options for ventilation, such as underarm zippers and 2-way front zippers.

VISIBILITY

Reflective details dramatically increase your safety in the dark. They also tend to make apparel look a tad too sporty for corporate use.

So, on the majority of our *Bike Friendly* styles, we have come up with some ingenious discreet design solutions, that let you hide the details when they are not needed.

Enjoy nature your way

Hygge

A woman with blonde hair tied in a bun, wearing a blue puffer jacket and black gloves, stands in a forest. She is looking towards a calm body of water, possibly a lake or a wide river, which reflects the surrounding trees. The trees are mostly bare, suggesting an autumn or winter setting. The lighting is soft and natural, creating a serene atmosphere.

Designed for urban explorers

Nothing beats the feeling of swooping by cars and buses stuck in morning traffic. The cold wind in your face is a refreshing reminder that you made the right choice. Commuting on two wheels, feeling warm, dry and safe is the best decision, you ever made.

Energy up. Pollution down. And you... fast forward.

We honestly don't know where to begin... This really shouldn't be possible.

With mindblowing specs, this jacket is a real game changer. It looks, weighs and feels like a delicate down jacket, and you would expect it to be a fragile and vulnerable piece. But this textile will resist a towering 25 meters of solid water pressure, before letting a drop through.

Then surely it is too dense to breathe, you say? Guess again. This is by far the most breathable jacket, we have ever made. You will be warm and dry. Inside and outside.

All. Winter. Long.

The down jacket - reinvented

These innovative styles remove the traditional weaknesses of lightweight down jackets which are fragile to rain and require an extra layer on top. By adding a water-repellant finish to the fabric protecting the hydrophobic down inside, we have created a series of lightweighters with a new technical chamber look that offers so much more than its look-alikes.

Sizes	XS-2XL
Fabric shell	Lightweight recycled nylon with 1,000 WP
Shell material	Recycled nylon
Lining material	Lightweight rip-stop polyester
Filling	Crystal Down® Dry 90/10 700+ European water-repellent down
Filling weight	160 g (S)
Total weight	460 g (S)
Construction	Bonded seam construction
Item no.	1139

Bring on winter

A super light weather warrior with extra down insulation, H-box-construction and a water repellent shell to take you blazing through the coldest months of the year.

RAI

Extra warm water-repellant lightweight down jacket

- H-Box construction
- 1.000 mm water column and DWR finish on shell fabric
- Crystal Down® Dry filling
- Adjustable ergonomic hood
- Ultra small pack size
- Recycled shell fabric

Colour	Lemon Dress Blue / Lemon Black
Sizes	S-3XL
Fabric shell	Lightweight recycled nylon with 1,000 WP
Shell material	Recycled nylon
Lining material	Lightweight rip-stop polyester
Filling	Crystal Down® Dry 90/10 700+ European water-repellent down
Filling weight	180 g (M)
Total weight	470 g (M)
Construction	H-Box
Item no.	1130

Ideal for any outdoor adventurer looking for lightweight insulation to drive your performance further. Keeping you warm in cold conditions as a stand-alone or perfect as your second layer.

No matter which adventure is next, you'll need to bring this along.

ATTENTION!

Nerdy Topic Alert

Is there such a thing as a smart membrane?

Well, we have made our race shells intelligent by using a membrane that adapts to temperature and moisture. The warmer you get, the more breathable it becomes. And the colder you get, the more it keeps your body heat sealed in.

We know it is nerdy, but to us; membranes are sexy!

RACE INTELLIGENTLY.

HORIZON

Unisex 3 layer stretchable pants

- Temperature adapting membrane
- Long side zips
- Velcro adjustment on lower legs
- Pre-bent and shaped knees

Die | Manufaktur

HOME OF THE DOWN SPECIALIST

Die|Manufaktur

Zolli has been sewing sleeping bags for us for more than 30 years. She knows everything about how to make the perfect sleeping bag!

HANDMADE IN GERMANY FOR ALMOST 40 YEARS

Since 1983, we have been crafting our down filled sleeping bags in Germany, by hand. A proud tradition that would have been easy to abandon by finding cheaper labour and rent elsewhere on the planet. However, since high quality matters to us, we chose to do the opposite.

In 2020, we invested in a new state-of-the-art facility in Görlitz to carry on this tradition with pride and dedication. By staying close to our customers in Europe, we offer unique services, extraordinary quality and a guarantee that your product is made to last forever. **We fix it all!** Sustainability begins with products that last.

With skilled craftsmanship and modern service facilities placed locally in Europe, we can ensure a fast, reliable and easy service on all products, so you can enjoy nature with a clean conscience.

Die | Manufaktur

**TRUE
SUSTAINABILITY
IS PRODUCTS
THAT LAST**

Prolong your product lifespan

A careful selection of sustainable materials and production processes is only half the journey to a truly sustainable product. Expanding the product lifespan is really the simplest and most achievable way to ensure our pact with nature. By buying quality products, built to withstand the surroundings you use it in, and designed to last, you can help spare our precious environment tons of CO₂ emissions.

Repair service

In the unlucky case of breakage or damage to your product, we offer in-house repair service by our highly skilled machinists. Chances are, that it may be the same person who made your sleeping bag in the first place. Whether your product has a tear, need a new zipper or simply need a refill of down to restore the fill power, our repair service is a quick and highly qualified solution to your needs.

Wash service

Down products are often chosen because they are naturally light, airy and fluffy. But they can be a bit difficult to handle when it comes to cleaning. Both down and technical fabrics are delicate and require special treatment to maintain its high natural quality.

That is why we offer a unique wash and care service for all our products, making sure they will last a lifetime for the benefit of your wallet and the nature, we care so deeply for.

Die Manufaktur

Die|Manufaktur

In our new Nordisk Care & Repair Centre in Görlitz, Germany, you can meet our passionate staff, some of whom have more than 30 years experience in producing and repairing our premium outdoor products.

Nordisk Care & Repair visitors center

**Do you want to see how a high quality handmade
down sleeping bag is actually made?**

Come visit our facility, see and experience this unique process during a tour of our factory. Bring your work team or special guests for day out or a seminar.

You might think that down is just a great filling for a jacket or sleeping bag to keep you warm, but to us it is a science, since there are so many possibilities. It is an adventure that we are very proud to take part in.

Your passion is also our passion.

Down filling

CRYSTAL DOWN®

We develop equipment for expeditions exploring the coldest areas of the world and therefore, all our products are filled with Crystal Down® – a selection of the absolute finest and most voluminous European down.

Crystal Down® – a masterpiece of nature

Mother nature ensures that all of our sleeping bags and garments are highly insulating and keep you warm while being surprisingly light. The secret is the finest insulation material known to man; down – it keeps birds warm, yet light enough to fly. Nothing beats Mother Nature. Down are by nature highly packable as they resist a small amount of pressure, but gives in under stronger pressure. The down withstand the impact and return to its initial form when decompressed.

Gentle but tough

The down that warm the goose's chest and belly are excellent. Thousands and thousands of super-soft, keratin filaments grow radially outwards from a tiny centre. Each of these filaments contain innumerable tiny, branch-like fibres with nearly invisible hooks. When the down are packed together, they attach themselves to each other and build thousands of tiny, warmth-retaining air chambers. This natural solution is lighter, more flexible and insulates better than anything humankind has ever developed.

The loftier, the fluffier

Down are static masterpieces with a fill power (loft), that resists a small amount of pressure, but gives in under stronger pressure. Loft is measured by laboratories under the supervision of the International Down and Feather Laboratory (IDFL) in Salt Lake City, USA. The higher the volume, the higher the loft and the quality. Our special down achieve the highest possible bulking power of up to 900 cubic inches. In recognition of its large, organically grown power and beauty, they are called Crystal Down®.

Crystal Down® Dry

Down have a tendency to collapse when wet, which has kept down fanatics a bit frustrated under very humid conditions. But not anymore. It is possible to prevent the down from absorbing water using a special technology. We call Crystal Down® – treated with this technology – Crystal Down Dry®.

In 2014, we started to fill the jackets Mode and North with this innovative kind of down. Today, we are using Crystal Down Dry® in a large number of products including the Arctic range of high-end sleeping bags and the range of down filled rain jackets.

Down variants

Crystal Down is used in the following qualities

600 / 90-10 Crystal Down

A good loft for most products. Clean feel and relatively light. Provides good insulation and nice breathability. Not the lightest of mixes, but one of the warmest if weight is not important (but still lighter than fiber fillings).

700 / 90-10 Crystal Down

The value-for-money mix. Here you get nearly the same nice feel and breathability of the more expensive and finer down, but at a lower price and a higher weight. This mix performs very well, and is often our go to down in testing and comparing.

700 / 90-10 Crystal Down Dry

Here, we use our experience from regular down, but making the down hydrophobic. This down goes in a lot of our down-filled rain garments and hardcore sleeping bags. We recommend this down type in moist or wet areas where you need the extra protection.

750 / 95-5 Crystal Down

When nerdiness pays off. The loft is just a bit higher, and the mix sorting process is a bit longer, but it pays off in performance. With this you have down that ensures better temperature protection at a lower weight, and ensure a bit higher breathability.

800 / 95-5 Crystal Down

When the going gets tough and you need the lightest of products to reach your goal. With this down being so fine, they can be combined with the finest of nylons, meaning a very low weight and small pack size. This down is for when performance matters!

900 / 95-5 Crystal Down

Absolute high end down. The most fluffy down available, and the down creating the best heat-to-weight ratio. Only used in our most extreme addition products and of course our 'World's Lightest' products. Unbeatable performance, unbelievable weight.

FACT!

600 - 900+ fillpower defines the loft of the down. The higher loft, the less down (weight) you need to make the same temperature insulation.

FACT!

90/10 & 95/5 mix – the mix defines the down to feather ratio. The less feathers, the lower the weight.
